Water Commissioner's Report.

On the night of December fifth, 1892, the town of Raymond was visited by a disastrous conflagration which in the face of the vigorous efforts of the citizens, assisted by the fire departments of the cities of Manchester and Portsmouth, laid waste nearly the entire business portion of the village. Long before the night was gone twenty-seven sets of buildings were in ashes, stocks of goods were scattered about the common and pieces of household furniture were lying on every hand in confusion.

The fire originated in the northwestern end of the store building known as the old Blake store; quickly bursting through the roof it spread rapidly and soon the postoffice building and the store occupied by Rowell & James were in flames, when it leaped across the street burning the store of C. A. Shepard, Odd Fellows' building, C. W. Prescott's block, E. S. Poore's barber shop, and meat market of F. E. Page, O. W. Fellows' blacksmith shop, the Congregational church and vestry, C. & M. passenger and freight depots, the M. E. church, store of S. H. Shattuck & Son and buildings of W. H. Bailey, L. E. Perkins, Ada E. Whitcomb, D. J. Whittier, J. L. James, O. W. Fellows, A. G. Whittier, Olive E. Bean and D. C. Healey. So rapid was the progress of the fire that only a small part of the contents of the buildings was saved. Before the embers had entirely died out a meeting of the citizens was held in Ladd's blacksmith shop, when a committee of three, consisting of J. T. Bartlett, True M. Gould and H. L. Pollard was appointed to devise some means for providing the village with a supply of water and with means for the extinguishing of fires. The selectmen at this time posted a call for a town meeting for a similar purpose, and when the day of the

meeting arrived a committee consisting of W. J. Dudley, O. T. Brown, W. H. Bailey, A. G. Whittier, H. L. Pollard, D. C. Healey and T. M. Gould was appointed to investigate the subject and report at a subsequent meeting. The committee applied to the legislature and obtained the passage of an act authorizing the town to construct a water system. See Laws of 1893, Chap. 138. Then after making a careful examination of the various proposed sources of water supply and the methods of obtaining and utilizing it, they employed Messrs. Farrington and Scruton, civil engineers, to visit the locality, which they did, and they drew a plan and made estimates of the cost of a water system for supplying the village with water for domestic purposes and for extinguishing fires. The plan with the engineers' estimate of the probable cost of the proposed system was laid before the town, and on Feb. 28, '93, it was voted to construct the system and issue bonds with interest at 4 per cent. in payment.

The plan proposed embraced a standpipe 15 feet in diameter and 90 feet in height, placed upon an elevation 60 feet above the level of the common. The main pipe extending to the pumping station and up Main street as far as Ladd's blacksmith shop was to be 10 inches in diameter, from this point across the river into the street 8 inches in diameter and all other pipe of the distributing system 6 inches in diameter. The water was to be obtained from driven wells.

The system has been built practically upon the plan proposed under the personal supervision of Mr. L. E. Scruton, C. E., of Portsmouth, N. H., who early in April prepared specifications for the standpipe, the pipe to be used in the main and for laying the pipe. Several copies of each were mailed to different parties inviting them to make bids. Replies and bids were received, considered and the contracts made. The building of the standpipe was let to the Cunningham Iron Works Co. of South Boston, Mass.; the pipe laying contract was let to Moore & Co., of Boston, and the contract for making the pipe to the McNeal Pipe and Foundry Co. of Burlington, N. J. The progress of the work was impeded by delays in the arrival of the pipe and but little work was done excepting that done upon Standpipe hill until the latter part of June, when a portion of the pipe having arrived the pipe laying was begun.

The shoe factory of F. M. Hoyt & Co., containing a 60 h. p. boiler, engine, shafting, a Blake pump and many other things was purchased and fitted up for a pumping station. The price paid for the plant was \$4,000, and about \$2,300 has been expended in fitting it up for its present use, which includes the cost of a new Knowles pump of sufficient capacity to raise from 500 to 800 gallons of water per minute from the wells to the standpipe. Should an accident happen to the standpipe or a fire occur when it was empty, this pump will when working well supply from two to four good fire streams with ease. The Blake pump has a capacity of from 300 to 400 gallons per minute and it can also be used as a fire pump. Both pumps are kept in readiness for use and if one is disabled the other can be relied upon to do the work. There is also a vacuum pump manufactured by the Knowles Co., which is designed to take the air from the water coming from the wells. The cost of the two pumps, not including the Blake pump which was purchased with the factory, was \$1,012.30 which includes the expense of the engineer in setting up the pumps. The shoe factory has been repaired and is now occupied by Chase, Chamberlain & Co., who have contracted to pump the water for five years from Jan. 1, '94 for \$500 per year and the use of the factory. The standpipe is filled every night and the pumps, in case of fire, will start at a moment's notice.

The pipe and special castings furnished by the McNeal Co. cost \$6,087.95. This includes the sand chamber designed by Mr. Scruton for the purpose of separating the sand which may come from the wells, from the current of water before it reaches the pump, and also for separating from the water coming from the wells such air as may come with it so that it may be taken up by the vacuum pump, (a pipe from which enters the top of the sand chamber) before it can reach the steam pumps to interfere with their action; the sand chamber seems to perform its work in a satisfactory manner.

There are gates in the system to shut off each branch from the other, and one which shuts off the standpipe from the use of the system, and another which shuts off the pumping station from the system. The gates are of the Rensselaer pattern and their location is accurately indicated in a sketch book prepared by the engineer. The hydrants, of which there are 23, made

by the Holyoke Hydrant and Iron Works company of Holyoke, Mass., are placed at such intervals along the mains as will best protect the property in the village from fire. They are so arranged that four fire streams can be directed upon any building upon the line. The cost of the gates and gate boxes was \$436.70, and of the hydrants, of which we have two extra ones, the cost was \$525. Each hydrant will have a standpipe pressure upon it of not less than 64 lbs. and in most instances the pressure is several pounds more. With the standpipe cut off from the system by a gate, the pumps can exert a greater pressure even than this. There is now no building in town too lofty to be protected by the standpipe pressure alone.

The pipe laying contract which was awarded to Moore & Co. was sublet to Lucius A. Taylor of Boston, Mass., upon the same terms and conditions as it was let to Moore & Co. The work was begun in June and finished in October, the price being 25 cents per linear foot for excavating, laying the pipe, setting the hydrants and gates and refilling the trench, covering the pipe five feet deep; the price for rock excavation was \$6 per cubic yard. The total length of the main pipe was 9,120.7 feet and the amount paid and to be paid is \$2,503.92.

The suction pipe or that between the pumping station and the wells including the 8 in. pipe in the well system was laid under a contract with Mr. L. A. Taylor, and the price to be paid was \$780. Ten per cent. of the price for the main line is not due until after the spring opens and this sum and the whole of the price for the suction pipe is still unpaid.

The land upon Standpipe hill was purchased, the price fixed and the deed written early in the year before anything was done to the hill. The deed has not been signed by the owner as yet, but we understand it will be signed soon. The price to be paid for it is \$100. Mr. A. B. Trefethen of Portsmouth built the foundation for the standpipe. It was done by contract and the price was \$275. It was made of stone laid in cement with a circle of cut granite around the top of the foundation upon which the standpipe rests. The standpipe was built in courses with four pieces in each course and eighteen courses high tightly riveted together after the manner of a steam boiler. It is furnished with a ladder on the outside and another on the inside and is held in place by its own weight, by

the weight of the water it contains and by six huge bolts two inches in diameter fastened to the rim and extending below the foundation into the solid ledge upon which the foundation rests. The iron of the standpipe is capable of withstanding a tensile strain, it is supposed, of 50,000 lbs. per cubic inch and it is exceedingly well made. The main pipe of the system extends up through the middle of the standpipe and is a little taller than the standpipe itself. All the water that makes its way into the standpipe passes up through this pipe and is discharged into it over the top of the pipe. An electric wire connects the top of the standpipe with the gong in the pumping station, thus informing the engineer when the standpipe is full.

One of the most troublesome questions that have arisen was regarding the location of the wells, but after testing in several localities at considerable expense they were finally located beside the river at the north of the village. Twenty wells were made of an average depth of 39.5 feet, all of which are 2 1-2 inches in diameter and are connected with an 8 in. main passing midway between the two rows of wells. The soil in which they are made consists mainly of layers of sand of different colors and the wells are formed in a layer of coarse gravel immediately under a layer of this sand closely resembling the sand of the seashore in color and fineness. This layer varies in thickness, but in some instances it was found to be 30 feet thick and forming a cone to the wells impervious to anything except water itself. The capacity of each well was tested as it was made and the capacity of the whole system is probably not less than 1,000 gallons per minute. Each well is provided with a gate for shutting it off, in case of accident or for repair, from the remainder of the system. The wells are about 25 feet apart in each row and the rows are about 35 feet apart, the whole system being about 250 feet in length. The following is Prof. E. R. Angell's analysis of the water made when the wells were new. The water was then slightly milky in color and appearance; it is now perfectly clear.

SANITARY ANALYSIS OF WATER.

Board of Water Commissioners, Raymond, N. H.:

Odor, slight.

Color, little milky or turbid.

Evaporation, little foamy,

Residue, few circles and slightly yellowish.

Ignition of residue, it changes color but little.

Solids, grains per gallon,	6.0
Loss on ignition,	1.7
Hardness, degrees,	3.0
Alkalinity, degrees,	2.0
Chlorine, grains per gallon,	0.6
Free Ammonia, part per million,	0.08
Albumenoid Ammonia,	0.05
Nitric Acid,	trace
Nitrous Acid,	none
Poisonous matter,	none
Iron	strong trace
Sediment,	considerable

Microscopic examination, free infusoria, mineral particles, sand, scales of mica, &c.

Oxygen for oxidation, grains per gallon, 0.079

This is good water; it is very free from organic matter; the turbidity is due to fine mineral particles held in suspension. It contains at present more sediment than is desirable, but it is almost wholly mineral matter and after the well has been used for a time this will disappear.

EDMOND R. ANGELL.

Derry, N. H., Aug. 15, 1893.

When the system was completed and the pumps started in October it was found that for some reason they did not work so smoothly as was expected or desired, though it was not clear that it was through any fault of the pumps. There appeared to be a great quantity of air in the suction which interfered with their action and compelled them to be run at a low rate of speed, and much longer time was consumed in pumping than was contemplated. This difficulty, though not by any means removed, is considerably abated and now we can pump about 35 per cent. more water than at the beginning, and it is hoped that a larger vacuum pump will lessen and perhaps remove the difficulty. The works have been procured at the expenditure of a large sum of money and the cost may have exceeded the expectations of the people of the town, yet it has been done as prudently, it seems, as it could be done consistently with true economy. Everything from the standpipe to the wells is strong and durable, and every part is calculated to perform the work for which it was designed with ease. There is nothing of inferior quality in it. In making the wells no satisfactory arrangements with people engaged in the business could be made and the work was done by the citi-

zens of the town, to the entire satisfaction of the engineer and with quite a saving to the town.

The running expenses of the system since the pumps were started, the amount paid for coupons, the amount received from sale of pipe, from putting in the service pipe and the value of pipe and tools on hand should be taken from the gross expenditures in obtaining the net cost of the system as appears below.

The work of putting in the service pipe was interrupted by the cold weather before all the applications had been filled. The number of takers is thirty and the income derived therefrom is upwards of \$450 annually, which includes the \$250 paid by the C. & M. Railroad. It is confidently expected that the number of takers will be materially increased during the coming year, thus adding to the income.

The town is to be congratulated upon the quality of the water obtained, which is all that could be desired, comparing favorably with water from a mountain spring, its abundant quantity, upon the efficiency of its hydrant service and upon the possession of the system as a whole. It may mark the beginning of an era in the prosperity of the town, while it is a monument to the courage, energy and generosity of its people. The tables follow; all of which is respectfully submitted.

JOHN NORRIS TILTON,
Treasurer.

Auditors' Report.

We, the undersigned Auditors of the Selectmen's, Treasurer's and Water Commissioners' Accounts of the town of Raymond for the year ending February 15, 1894, have carefully examined said accounts and find them correctly cast and properly vouched.

EBEN S. GRIFFIN, }
HARRIS B. LADD, } Auditors.

Report of School Board.

District No. 1.

The school in this district has been for the past year under the care of Miss Elizabeth Rowe of Freemont. It was conducted in a satisfactory manner. This school is very much smaller than in former years.

District No. 2.

Both terms of this school were in charge of Miss Carrie Corson of Raymond. This was Miss Corson's first experience at public teaching and the results were in every respect satisfactory. Under her instruction the school made fine progress. Excellent order and system prevailed and we earnestly recommend her as a young teacher of much promise.

District No. 3.

Both terms of this school were taught by Miss Anna L. Healey of Raymond. Miss Healey being one of our experienced teachers we expected good results from her teaching and were not disappointed. The progress made by the school was good, and order perfect. This teacher possesses qualifications for excellent work as a teacher and may be properly reckoned as one of our best teachers.

District No. 4.

This school was, during the past year, under the instruction of Miss Belle Cram of this town. This school, though small, always does good work. It was conducted in an able manner.

District No. 6.

Miss Mary Scribner had charge of this school during the year. A good attendance was maintained throughout both terms and satisfactory progress made.

District No. 7.

The school in this district has been, for the past year, under the care of Miss Susie Green of this town.

Owing to illness of the teacher, and also in her family, necessitating the closing of the school two weeks early, both terms, your committee did not visit the school but once during the year. Miss Green's former record as a teacher, we have every reason to believe, was fully equalled or excelled; and think that the school was a success in every sense of the word.

The school was under the care of Miss Eva D. Smith for four weeks and carried along faithfully to a successful termination.

District No. 8—Primary School.

The primary school during the year has been in the care of Miss Eva D. Smith. This school is large and necessitates a great deal of work. We think Miss Smith met the emergency well.

District No. 8—Grammar School.

The pupils in this school have enjoyed unusual facilities for good instruction. All have appreciated them and done their best to improve them. Great interest has been shown by the parents and friends of the scholars and teacher. This school was taught by Miss Lizzie C. True.

District No. 9.

This school was conducted in a very able manner by Miss Fannie L. Gile of this town. Great progress was made and excellent order maintained. The school was in rather a chaotic condition when Miss Gile assumed charge, but owing to skillful management it was placed upon its proper basis.

Free High School.

Our high school has been under the care of Mr. Harry N. McLaren of Manchester and conducted in a very satisfactory manner. Mr. McLaren came to us well recommended and we have not been disappointed in any way. Good progress was made and excellent order maintained.

As to a general report we have not much to add. But few repairs were made, except in Union Branch at Candia. This schoolroom was reseated and repaired generally, thereby put-

ting all of our school buildings in good repair except the high school room.

We wish to call attention to the fact of the cost of teaching some of our outlying district schools. We have two or three which necessitate the paying of twenty to twenty-seven dollars per year for each scholar. Some way should be provided by which we can reduce the cost of these schools.

The schools throughout the town have completed a successful year's work. A good average attendance has been maintained and commendable progress made. Our teachers have labored zealously and success has crowned their efforts.

All of which is respectfully submitted,

GEORGE H. GUPTILL, } Members
L. O. POLLARD, } of
E. S. GRIFFIN, } School Board.

Roll of Honor.

The following pupils have attended school the whole year without being absent or tardy:

Bessie Bartlett	Hattie T. Carlton
Florence M. West	Fred Sinclair
Emma M. Healey	John E. Healey
James S. Batchelder	Sadie L. Davis
Mabel L. Brown	Edward G. Gilman
Lucinda Davis	David A. Heath
Ida M. Spinney	Ida M. Page
Bertha F. Spinney	Raymond Prescott
Bertha F. Healey	Smith A. Beane
	Raymond D. Robie.

Raymond D. Robie.

The following pupils have attended one term without being absent or tardy:

Stella Nelson	John M. Cram
Daisy Smith	Eva L. Rollins
Charlie Lane	Annie B. West
Sadie J. Littlefield	Lillian G. Pollard
Linan E. Tilton	Nellie M. Prescott
Edna M. Roberts	Bernice H. Tilton

Arthur Gilman	Edna May Wason
Oscar Gilman	Bert E. Bean
Lewis B. Hicks	Susie Brown
Cleavland Allen	Everett W. Fellows
Frank Dudley	Nellie M. Gerrish
Byron O. Smith	Agnes S. Hicks
Donald A. Smith	Ethel M. Jones
Mittie J. Smith	John P. Littlefield
Edith C. Wallace	Mabel G. Rowell
Ruth S. Healey	Joseph E. Rowe
Ada L. Bartlett	Ira C. Bean
Clarence A. Spinney	Fred Lyman
Mabel E. Currier	Ada M. Bean
Bertha L. Robie

" by incidental expenses	1 67
" cash on hand	14 69
	\$50 00

At the last stated town meeting library trustees were appointed to receive the books given by the state for the purpose of starting a Free Public Library, to furnish bookcases, supplies, etc., and a suitable place for opening and maintaining the library.

The books from the state, valued at one hundred dollars, were received August 14, 1893. They were properly classified, catalogued, and arranged in a suitable bookcase, which was placed in the Town hall, it being the only place then accessible.

Since the library was opened it has been increased by the addition of fifteen books given by people interested in the library. We have 140 books in all, which are kept in constant circulation. They are standard works, written by some of the best American and English authors.

It has been suggested that people having old magazines, and willing to contribute them, can furnish, thereby, very desirable additions to the library at a trifling cost for binding, which the trustees will attend to.

The library has been in charge of Harry White, who has opened Monday evenings for distributing the books. Harry has taken the duties and responsibilities of librarian on the same pecuniary conditions the trustees assumed theirs.

We have performed the duties given us as well as we could, under the circumstances, and shall expect the same cheerful help from the citizens of Raymond, towards increasing the size of the library, as we have given in starting it.
